Description : The Workshop on Geometric Evolution Equations was a gathering of experts that produced this comprehensive collection of articles. Many of the papers relate to the Ricci flow and Hamilton's program for understanding the geometry and topology of 3-manifolds. The use of evolution equations in geometry can lead to remarkable results.

an evolution equation for a curve is geometric if the velocity is expressed purely in terms of objects invariant under Euclidean motions, i.e., the Frenet frame, the curvature and torsion of the curve, and infinitely many of their arclength derivatives.

Integrable geometric evolution equations for curves

In section 3 we study the general evolution equation (1.1) and obtain evolution equations for metric, normal, second fundamental form and related geometric quantities. We discuss the parabolic nature of the evolution equations, a shorttime existence result and introduce the main examples.

In section 3 we study the general evolution equation (1.1) and obtain evolution equations for metric, normal,

second fundamental form and related geometric quantities. We discuss the parabolic nature of the evolution equations, a short-time existence result and introduce the main examples. We study the mean curvature flow in section 4.

Geometric evolution equations for hypersurfaces

Various topics in geometric evolution equations and related fields are presented. Among other topics covered are minimal surface equations, mean curvature flow, harmonic map flow, Calabi flow, Ricci flow (including a numerical study), Kähler-Ricci flow, function theory on Kähler manifolds, flows of plane curves, convexity estimates, and the Christoffel-Minkowski problem.

The Einstein equations can be interpreted as a hyperbolic evolution system for the induced metric and extrinsic curvature of a 3-dimensional spacelike hypersurface creating the 4-dimensional spacetime through time.

Evolution Equations in Geometry | Springer for Research

If the equation $=$ is the Euler-Lagrange equation for some functional F , then the flow has a variational interpretation as the gradient flow of F , and stationary states of the flow correspond to critical points of the functional. In the context of geometric flows, the functional is often the L^2 norm of some curvature.
