BupPractice is designed to positively impact buprenorphine patient outcomes, providing the knowledge and skills needed to prescribe buprenorphine safely and effectively.

### **Home â€” BupPractice**

With improved obstetrical management and evidence-based use of intrapartum antimicrobial therapy, early-onset neonatal sepsis is becoming less frequent. However, early-onset sepsis remains one of the most common causes of neonatal morbidity and mortality in the preterm population. The identification of neonates at risk for early-onset sepsis is frequently based on a constellation of perinatal ...

Ezetimibe is a drug that lowers plasma cholesterol levels. It acts by decreasing cholesterol absorption in the small intestine. It may be used alone (marketed as Zetia or Ezetrol), when other cholesterol-lowering medications are not tolerated, or together with statins (e.g., ezetimibe/simvastatin, marketed as Vytorin or Inegy) when statins alone do not control cholesterol.

Botulinum toxin produced by *Clostridium botulinum* is the cause of botulism. Humans most commonly ingest the toxin from eating improperly-canned foods in which *C. botulinum* has grown. However, the toxin can also be introduced through an infected wound.

### **Botulinum toxin - Wikipedia**

Multiple biological, synthetic and hybrid polymers are used for multiple medical applications. A wide range of different polymers is available, and they have further the advantage to be tunable in physical, chemical and biological properties in a wide range to match the requirements of specific applications.

Retinopathy. Women with type 1 and type 2 diabetes should ideally have ophthalmological assessments before conception, during the first trimester, as needed during pregnancy, and within the first year postpartum. The risk of progression of retinopathy is increased with poor glycemic control during pregnancy, and progression may occur for up to 1 year postpartum.

Oxidative stress is a normal phenomenon in the body. Under normal conditions, the physiologically important intracellular levels of reactive oxygen species (ROS) are maintained at low levels by various enzyme systems participating in the in vivo redox homeostasis. Therefore, oxidative stress can also be viewed as an imbalance between the prooxidants and antioxidants in the body.
