It's no secret that PDF software creates documents with a smaller file size than any of the large word processors on the market, even when the content is identical. Yet even though PDFs do consume less space than the alternatives, there are still cases in which you need to scale back a document created with PDF software due to the number of bytes the file takes up.

In computing, an optimizing compiler is a compiler that tries to minimize or maximize some attributes of an executable computer program. The most common requirement is to minimize the time taken to execute a program; a less common one is to minimize the amount of memory occupied. The growth of portable computers has created a market for minimizing the power consumed by a program.
