modified and updated version of the combined prior three reports (3,4,9) issued by the American College of Radiology Blue Ribbon Panel on MR Safety, chaired by

ACR Guidance Document on MR Safe Practices: 2013

Multiple sclerosis is an inflammatory demyelinating disease of the CNS in which activated immune cells invade the central nervous system and cause inflammation, neurodegeneration, and tissue damage. The underlying cause is currently unknown. Current research in neuropathology, neuroimmunology, neurobiology, and neuroimaging, together with clinical neurology, provide support for the notion that ...

Pathophysiology of multiple sclerosis - Wikipedia

Influenza, one of the most common infectious diseases, is a highly contagious airborne disease that occurs in seasonal epidemics and manifests as an acute febrile illness with variable degrees of systemic symptoms, ranging from mild fatigue to respiratory failure and death. Influenza causes significant loss of workdays, human suffering, and m...

Influenza: Practice Essentials, Background, Pathophysiology

The understanding of migraine pathophysiology is advancing rapidly. Improved characterisation and diagnosis of its clinical features have led to the view of migraine as a complex, variable disorder of nervous system function rather than simply a vascular headache.

The pathophysiology of migraine: implications for clinical

Keratoconus (KC) is a disorder of the eye which results in progressive thinning of the cornea. This may result in blurry vision, double vision, nearsightedness, astigmatism, and light sensitivity. Usually both eyes are affected. In more severe cases a scarring or a circle may be seen within the cornea.. While the cause is unknown, it is believed to occur due to a combination of genetic ...

Keratoconus - Wikipedia

Hemochromatosis is the abnormal accumulation of iron in parenchymal organs, leading to organ toxicity. This is the most common inherited liver disease in white persons and the most common autosomal recessive genetic disorder.

Hemochromatosis: Practice Essentials, Background

Syncope is a transient loss of consciousness secondary to inadequate cerebral perfusion with oxygenated blood. It is a common medical problem, accounting for around 5% of acute medical admissions and 3% of emergency department visits.¹ Syncope secondary to cardiac causes carries the worst prognosis, with a one year mortality rate of 20%–30%.² An understanding of the events preceding syncope ...

The pathophysiology of common causes of syncope

HO originates from several cell sources. These include hematopoietic stem cells, local resident mesenchymal stem cells (MSCs), circulating MSCs, muscle satellite cells, fibroblasts, progenitor cells derived from vessels 17, 18, 19. Cell lineage tracing studies were performed to determine the stem/progenitor cells responsible for HO in the BMP-induced HO mouse models 14, 20.

Mayo Clinic Health Letter provides reliable, authoritative and accurate health information. Discover why it is

one of the leading health publications.

Mayo Clinic Health Letter

Abstract. In Brief. The pathophysiology of the link between diabetes and cardiovascular disease (CVD) is complex and multifactorial. Understanding these profound mechanisms of disease can help clinicians identify and treat CVD in patients with diabetes, as well as help patients prevent these potentially devastating complications.
