

silicon polymers advances in pdf

Silicone polymers are expensive compared with organic polymers because of the cost of reducing silicon dioxide to silicon. In the Rochow process, this is then heated with appropriate catalysts to 300–400 °C and reacted with methyl chloride to give a range of methyl-substituted chlorosilanes.

1) Silicone rubber. The free volume of silicone rubber depends on temperature. Lower temperature results in less free volume and consequently lower permeability. Meanwhile, the mobility of polymer chain of silicone rubber is low at lower temperature. Low mobility of the polymer chains restricts the diffusion of gas molecules.
