Molecular Cell is a companion to Cell, the leading journal of biology and the highest-impact journal in the world. Launched in December 1997 and published monthly, Molecular Cell defines the field of molecular biology with a relatively small number of significant papers, up to 15 articles per issue. Coverage will extend from structure to human diseases, concentrating on molecular analyses.

For more than 30 years, top international researchers have relied on Cell to publish high impact papers that have come to form the foundation of contemporary life science research. Founded by Benjamin Lewin (author of Genes), Cell remains at the forefront of exciting developments in biology, continually redefining the important areas of science with cutting edge papers.

Cell biology (also called cytology, from the Greek κύτος, kytos, "vessel") is a branch of biology that studies the structure and function of the cell, which is the basic unit of life. Cell biology is concerned with the physiological properties, metabolic processes, signaling pathways, life cycle, chemical composition and interactions of the cell with their environment.

Mechanisms of membrane translocation. Cell-penetrating peptides are of different sizes, amino acid sequences, and charges but all CPPs have one distinct characteristic, which is the ability to translocate the plasma membrane and facilitate the delivery of various molecular cargoes to the cytoplasm or an organelle.
